*The Guidance of
Experience*

Guided Wave's recent move to a new larger facility in Rancho Cordova, CA has provided the necessary room for the company to expand operations. Product line extensions from an acquisition and technology licensing will be the catalyst for company growth over the next year.

Guided Wave has entered an agreement to acquire by merger Optical Solutions, a leading supplier of process photometers, diode array spectrophotometers and sample probes for use in UV/VIS/NIR. "Optical Solutions brings Guided Wave an excellent photometer product line and a strong team of experts in analytical process system development, engineering and support", states Dr. Roger Schirmer, Guided Wave's President.

Optical Solutions key products include patented SMART Photometers™ including: ClearView™, ChemView™, Simulplex™, and ChemViewMx™. "We plan to continue development and support of each of these innovative products with a commitment to maintaining the established excellent customer support", continued Schirmer.

Guided Wave has also completed a license agreement with Bayer Material Science LLC, which provides Guided Wave exclusive rights to manufacture and sell process photometers employing the Bayer Technology.

According to Schirmer, "The company's new larger location provides substantial space for both of these growth opportunities".
